

AUTOMATION AND DATA ANALYTIC PROCESS TEAM SUCCESS STORY

DATA WAREHOUSE, BUDGETING, AND REPORTING TOOL FOR MEDICAL DEVICE MANUFACTURING COMPANY

The company's goal was to replace their current reporting and budgeting software with a new solution which improved the efficiencies and enhanced the overall capabilities of their budgeting and reporting processes. This solution required the development of automated integrations of multiple financial and operational systems with a data warehouse, coupled with a reporting tool for enhanced financial and operational reporting.

In addition, budget templates designed to interact with the data warehouse, and used by budgeting personnel during the budget season were developed. Benefits included streamlined and more efficient budgeting processes by reducing the manual data extraction and manipulation effort; more accurate, timely and efficient financial reporting through automated data source integrations; and improved report design capabilities.

About Schneider Downs Technology Advisors

Our consultants combine practical business experience with up-to-date technical options to implement cost-effective solutions for our clients. Our association with industry-leading technology companies provides our clients with the latest industry-specific, low-risk and proven solutions. Through vendor certification programs, advanced education and industry conferences, our consultants are trained and certified on the latest products and services. Our consultants bring a variety of experiences, technical knowledge and industry certifications to our clients, providing an ongoing and effective partnership.
